

The Diagnosis and Management of Developmental ADHD and Behavioral Problems

How do I help her become Normal???

TRUST IN Love, The Strengths WILL Come!!

LOVE IS THE GREATEST MAGIC THERE IS...

*“He didn’t realise that love as powerful as your
mother’s for you leaves its own mark. Not a scar,
no visible sign... to have been loved so deeply,*

*even though the person who
loved us is gone, will give us
some protection* **forever.”**

Strengths Will Begin To Emerge

Attention!

MANAGEMENT

Contributing Factors

Short Term Memory

- Storage and retrieval of information within 20 seconds of processing
- Very limited storage, most people can not hold more than 7 memories at once
- Attention to the stimulus is essential to short term memory

Working Memory

- Think of Working Memory like the amount of items that can be held on a countertop
 - Working memory allows us to hold this information in our heads, while at the same time manipulating those items on the countertop

This is Essential to Reading Fluency and ADHD children Struggle with working Memory EVERY DAY!!

Primarily because of a deficiency in attention.

Long Term Memory

- Not really a factor in ADHD
- HOWEVER!!! Anxiety with is often comorbid with ADHD IS!!!
- 504 are Essential with dealing with Test Anxiety
